FAQ: www.post.lu/support

Step 1

Unpack the Extender and check that all accessories are present.

Extender

Power cable

Step 2

Connect the Extender to the power supply

Your Extenders can be connected to each other via WiFi or using a network cable.

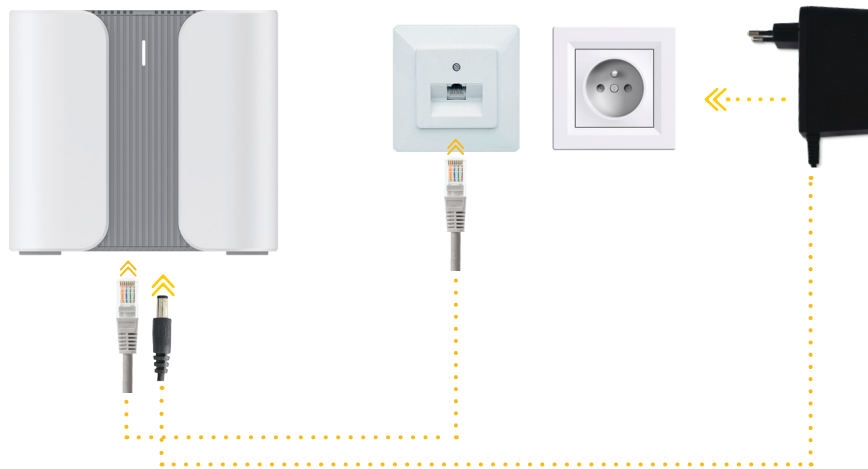

WiFi

For customers with a FRITZ!Box model: please connect your Extender to your FRITZ!Box using a network cable and disable the FRITZ!Box's WiFi network.

NETWORK CABLE

Setup for a home
with structured cabling

If your home has wired network connections, this can significantly increase the speeds achievable via WiFi.

Step 3

The Extender will automatically appear in the Plume Home app

Step 4

Join the network using your mobile phone. The network name (SSID) and password are printed on the back of your Homebox (Heights router).

Step 5

Disable other WiFi access points

If you're using other WiFi access points, please disconnect them to avoid interference and ensure your network works properly.

Step 6

Optimizing your WiFi network

Over the next 24 hours, your new Plume WiFi network will be optimized to deliver the best performance for your connected devices.
